

DATA SHEET NOAD EQM4 CHANGE MANAGER

ENTERPRISE CHANGE MANAGEMENT FROM DESIGN TO PRODUCTION

NOAD EQM4 Change Manager is an integrated change management solution for enterprise QlikView applications. NOAD EQM4 Change Manager automates and streamlines the entire application development process, providing visibility and control required in an enterprise environment—increasing developer productivity, improving code quality, and meeting regulatory and best practices requirements.

With NOAD EQM4 Change Manager, you can automatically track and accelerate the management of all your application and maintenance processes and workflows from design to production, when used in combination with NOAD EQM4 Deployment Manager.

NOAD EQM4 Change Manager keeps you in control of all parts of the application development lifecycle while increasing your developers' productivity so that you can deploy QlikView applications on time. Our products offer you complete change management for QlikView application development in any location. Its comprehensive activity tracking and performance reporting provide management with the input and feedback needed to optimize IT's responsiveness.

From the moment a change is initiated by creating a new version, you are in total control of your application development lifecycle and change management. What's more, NOAD EQM4 provides you with a means to easily keep compliant, from design through release to production, so passing an IT audit should never be a problem.

NOAD EQM4 CHANGE MANAGER FOR QLIKVIEW

- Easily monitors and manages multiple, geographically distributed and outsourced project teams
- Automates development processes, increase quality levels
- Grow in users and usage without growing in support resources
- Enforces and streamlines compliance requirements
- Simplifies maintenance development
- Secures QlikView applications, Tracks changes automatically
- Ensures quality level applications with comprehensive difference and build analysis

AUTOMATES DEVELOPMENT PROCESSES

NOAD EQM4 Change Manager streamlines the application development process to improve code quality. The automatic promotion process eliminates the manual movement of files virtually reducing the chance for errors. The promotion process can be controlled via role-based security, ensuring that components can't be promoted without the proper authorization.

ENFORCES AND STREAMLINES COMPLIANCE REQUIREMENTS

NOAD EQM4 Change Manager enables managers to quickly and consistently respond to internal regulations and legislated standards in parallel with the application development process. For each application, management can define a process to ensure that components automatically pass through the defined phases, and that company policies and government legislation are enforced. NOAD EQM4 reduces the administrative burden on developers by automating compliance requirements so developers are not delayed or distracted by mundane tasks.

EASILY MONITORS AND MANAGES MULTIPLE, GEOGRAPHICALLY DISTRIBUTED AND OUTSOURCED DEVELOPMENT TEAMS

NOAD EQM4 Change Manager enables fine-grained control of geographically distributed and outsourced development teams. Specific releases and modules can be easily created for use by distinct teams, limiting the accessibility of code to outside teams. Outsourced development can have its own environment, separated from in-house development. Unauthorized access to the code base is prevented through role-based security. NOAD EQM4 provides the control and management essential for successful distributed development.

TECH SPECS

NOAD EQM4 CHANGE MANAGER CLIENT REQUIREMENTS

- QlikView 8.5 or higher
- Windows XP SP3 / Vista Business / 7 Professional

SERVER REQUIREMENTS

- Windows Server 2003 / 2008

ADDITIONAL SOFTWARE

- Microsoft .Net Framework Redistributable Package
- Database (embedded provided) or
- Microsoft SQL Server 2005 / 2008 or Oracle 10g / 11g
- NOAD EQM4 supports VMWare

SIMPLIFIES MULTIPLE RELEASES

Coordinating the development of multiple releases is a common but complex task. NOAD EQM4 Change Manager simplifies the process by specifying and defining multiple releases through its release management capabilities.

INCREASE INFORMATION QUALITY

NOAD EQM4 Change Manager's analysis features allow engineers and development managers to analyze the difference between versions and improve quality with its build analysis; relations between components are shown in NOAD EQM4 Change Manager.

SECURES APPLICATION COMPONENTS

NOAD EQM4 Change Manager's security features provide powerful authorization and authentication. Users are grouped into roles, such as developers, development managers or senior IT managers, and are granted varying levels of authority, providing more control over access usage than ever before.

ACHIEVES INTEGRATION AND DISTRIBUTED DEVELOPMENT

NOAD EQM4 Change Manager's architecture integrates with the QlikView platform. Further, NOAD EQM4 provides automation, management and visibility of development across all environments. Development teams can focus on project deliverables, avoid unnecessary disruption and continue to operate within their environment.

AUTOMATES DEPLOYMENT

Deployment of applications and files is usually a manual process prone to error. NOAD EQM4 Change Manager works with NOAD EQM4 Deployment Manager at each stage of the lifecycle to gather, distribute and install application components. The user interface allows users to carefully track and govern distributed applications. For distributed environments, NOAD EQM4 Deployment Manager eliminates the need for complex scripts, dramatically simplifying deployment.

HOW NOAD EQM4 CHANGE MANAGER WORKS

After all QlikView applications and files are placed in NOAD EQM4 Change Manager's central repository, our software tracks the status at anytime. For software development, when you check an object out, it can be tracked throughout its entire lifecycle. In addition, the application components can be automatically deployed at each stage of the lifecycle. At each change, NOAD EQM4 Change Manager logs all changes and assures only authorized users perform any following operation.
