

NOAD EQM4 QLIKVIEW ENTERPRISE CHANGE MANAGEMENT

FROM INITIAL VERSION TO PRODUCTION

NOAD's Enterprise Change Management solutions provide enforceable, traceable change control processes from the moment an initial version is developed to a QlikView application's release into production. **NOAD EQM4** works in diverse environments, from SMB to Fortune 100 companies, from centralized to geographically distributed platforms.

NOAD EQM4 gives you total control over all aspects of change management enabling you to automatically see, capture, track, promote, and report on any changes in your business intelligence development cycle, anywhere, at any time. You'll always be able to control what's going on, while letting your team develop, collaborate, and create. What's more, all the change data is stored in a single repository, so it's readily accessible and retrievable at any time.

Because **NOAD EQM4** traces all the steps your developers take to make changes, you can easily control processes and keep costs down. This allows you to easily meet regulatory compliance, deliver quality applications, and speed up delivery times.

NOAD EQM4 CHANGE MANAGER

- Logical, business-oriented view of an QlikView environment
- Single click edit; QlikView is started automatically
- Point-and-click process; no scripts needed
- Complete activity logging and reporting on development process
- Simultaneous development on production applications
- Private development without checking out code
- Geographical distributed development, off shoring
- Difference, build and relation analysis

NOAD EQM4 DEPLOYMENT MANAGER

- Single click promotion
- Point-and-click process; no scripts needed
- Customizable workflows enforcing your IT policy
- Complete activity logging and reporting on distribution process
- Automatic tracking of component status as they are being distributed
- Scheduling of deployment jobs
- Easy redeploy and rollback

NOAD EQM4 COMPLIANCE MANAGEMENT

- Support for compliance such as Sarbanes-Oxley, HIPAA and GxP
- Complete history of all activity logs; within an entire lifecycle
- Workflow and state-event procedures and processes
- Role-based and/or individual permissions definitions
- Separated, distributed environments and Segregation of duties

COMPLETE WORKFLOW AND CHANGE MANAGEMENT

NOAD EQM4 automates and accelerates the workflow and change management process. You can create workflows or custom escalation rules so you can deal with the most complex escalation and approval rules possible in any environment. Our workflow and change management solution automatically authorizes, verifies, opens the editor with the correct component, archives iterations, sets states and events and stores versions so you don't have to. This means that you can get updates at any time, giving you the visibility, enforceability, and traceability necessary for internal and external compliance. And with the ability to define, automate, and enforce rules and processes, you can easily meet business deliverables.

AUTOMATIC DEVELOPMENT MANAGEMENT

NOAD EQM4 automatically organizes and maintains a central repository of all application components. You can instantly view and access application components across projects and locations allowing you to get status information of any application including relations between components in applications, any project, or any objects across the repository, any time. Automated difference, build and relational analysis help you to improve information quality and improve on delivery times.

ACCURATE DISTRIBUTION AND RELEASE MANAGEMENT

NOAD EQM4's automated deployment simplifies an otherwise complex, error-prone manual process. Our solutions ensure that the appropriate files are automatically deployed to the correct locations throughout the development process according to set workflows. Through one screen, you can easily track and manage even highly distributed applications. NOAD EQM4 deploys all components to appropriate target locations at every stage, distributes, and installs application components to all target platforms on a secure, authorized basis.

ENFORCES COMPLIANCE REQUIREMENTS

NOAD EQM4 enables managers to quickly and consistently respond to internal regulations and legislated standards in parallel with the application development process. For each application, management can define a process to ensure that components automatically pass through the defined phases, and that company policies and government legislation are enforced. NOAD EQM4 reduces the administrative burden on developers by automating compliance requirements so developers are not delayed or distracted by mundane tasks.

ONE SINGLE REPOSITORY

NOAD EQM4 automatically builds, organizes, and maintains a central repository of all application components. From one screen you can easily view and access all the application components by projects at various stages, across multiple distributed environments, in tandem with multiple project teams including off shore teams.

SUPPORT FOR MULTIPLE RELEASES

Applications can be broken down into versions or releases. This helps maintain custom versions or modified packaged applications. Our solutions even let your developers maintain a production version concurrently with a new version under development.

AUTOMATIC DEPLOYMENT AND INTEGRATED DISTRIBUTION

NOAD EQM4 ensures that the appropriate files are automatically deployed to the correct locations throughout the development process. NOAD EQM4 deploys the components to appropriate target locations at every stage, completely integrated so the process cannot be by-passed, and sets connections if necessary.

IMPROVE SOFTWARE QUALITY AND REDUCE COSTS

With the complete ability to capture, see, track, and report on all changes and releases, you now have the capability to continuously improve release integrity and further automate workflow.

FLEXIBLE OUTSOURCING, OFF SHORING

When your development is distributed all over, you can still have control. Specific releases and modules can be created for use by distinct teams, limiting the accessibility of application components to outsourced teams. Outsourced development can be separated from in-house development.

TEAM MEMBERS EVERYWHERE

You can let your developers collaborate with other team members no matter where they are. Those responsible for distribution can be on different locations but still work from the same single screen.

COMPLETE VISIBILITY FOR MANAGEMENT

Managers can always view, control, and report to auditors every change, all along the development road. NOAD EQM4 makes achieving IT compliance easy; plus you'll improve productivity and deliver high quality software at lower cost.
