

Q.

How does a top European mortgage company with over 1 million mortgage loans under its administration, totaling €163,412,000,000 in value, and handling 30% of all mortgages in The Netherlands manage their extensive SAP BusinessObjects environment?

A.

NOAD EQM

“NOAD EQM is imperative for Stater's SAP BusinessObjects deployment to comply with guidelines such as SOXA and Basel II”

Freek Heuff
Application Manager
Stater Information Services
Stater N.V.

Challenge: Stater is *the* end-to-end service provider for the European mortgage market, and supports mortgage financiers in the sale, processing and financing of mortgage portfolios. The management of their massive portfolio requires providing their customers with a state-of-the-art, paperless and workflow-driven process must be performed flawlessly and in full accordance with compliance guidelines such as SOXA, SAS70 and Basel II. With over 800 SAP BusinessObjects documents, it became essential that all changes were accountable, registered automatically according to compliance guidelines, and fully documented.

Solution: Realizing that extended version control in SAP BusinessObjects was lacking, Stater implemented NOAD EQM for their version control and deployment automation. Stater also controls their technical documentation with NOAD EQM, making it possible to restore previously approved versions in a production environment without searching for a particular version on their many file servers. Additionally, NOAD EQM provides real-time, online audit trails of *every* change, complete with time-stamps and user details.
